According to our (Global Info Research) latest study, the global Cage Free Eggs market size was valued at USD 1639.6 million in 2023 and is forecast to a readjusted size of USD 1947.5 million by 2030 with a CAGR of 2.5% during review period.

The concern for animal welfare has increased significantly in the past decade. With animal organizations setting up and campaigning against poultry and egg manufacturers, many companies are taking up initiatives for farm animal welfare. Cage free eggs market in the Europe region has witnessed significant growth after egg manufacturers have collaborated with animal welfare organizations. It is noticed that the lifestyle of hens affects their health and alters the nutrition status of the eggs. Studies have reported that cage free eggs have larger and deep orange yolks, which are known to have more fatty acid levels but no effect on the levels of cholesterol and are also tastier as compared to the conventional cage laid eggs.

Sensitivity towards animal welfare is relatively high in the Europe market than developing and underdeveloped markets. Despite increased cost of production and maintenance of cage free eggs, big manufacturers are compelled to cater to the demand of retailers. This demand has prompted manufacturers to opt for cage free egg manufacturing rather than conventional caged production. Increasing pressure by the government on manufacturers to switch to the production of cage free eggs is also boosting the growth of the market.
