Abstracts

The global Calamus Oil market size is expected to reach \$ 913 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Global sales of calamus oil reached 5,676 tons in 2025, with an average price of US\$112,363 per ton.

Popularly known as 'sweet flag,' the calamus essential oil is extracted from its roots. Calamus is a semi-aquatic, sweet-smelling herb with creeping roots. The plant has 2% essential oil that mainly comes from its roots or rhizomes via the process of steam distillation.

The raw material is the dried rhizome of *Acorus calamus* or *Acorus gramineus*. The yield of fresh rhizomes is approximately 400-500 kg per mu (approximately 0.16 acres), which, after drying, yields 120-150 kg of dried material. The oil content of the dried rhizomes is 1.5-3.5%, meaning 1.8-5 kg of essential oil can be extracted per mu. The cost of the dried rhizome already accounts for 35-40% of the ex-factory price.

Atmospheric steam distillation requires 6-8 hours, with coal, labor, and equipment depreciation totaling approximately 25-30 USD/kg. If upgraded to organic certification or supercritical CO₂ process, equipment depreciation and solvent recovery will increase by another 15-20 USD/kg, raising the overall cost of export-grade organic oil to 55-60 USD/kg.

This report studies the global Calamus Oil production, demand, key manufacturers, and key regions.
