Abstracts

The global Calcined Alumina market size is expected to reach \$ 3442 million by 2032, rising at a market growth of 3.6% CAGR during the forecast period (2026-2032).

Calcined alumina is made by firing a source alumina at various temperatures, depending upon desired level of calcination (burn), into alpha alumina varying from 5 – 100% moving it to its densest and most stable form. The calcined alumina particles appear as crystalline agglomerates which are larger when the degree of calcination is higher. Calcined alumina is generally used in the manufacture of refractories, glass and enamel, tile and porcelains and ceramics. The report covers non-metallurgical calcined alumina.

Global Calcined Alumina key players include Almatris, Alteo, Sumitomo Chemical, Showa Denko, CHALCO, etc. Global top five manufacturers hold a share over 40%.

Asia Pacific is the largest market, with a share over 50%, followed by Europe and North America, both have a share over 40% percent.

In terms of product, Standard Calcined Alumina is the largest segment, with a share over 25%. And in terms of application, the largest application is Refractory Materials followed by Ceramics.

This report studies the global Calcined Alumina production, demand, key manufacturers, and key regions.
