Calcined kaolin is an inorganic non-metallic material that is sintered in a calcination furnace to a certain temperature and time, causing a certain change in its physical and chemical properties. This product has high whiteness, good insulation, good precipitation resistance, good corrosion resistance, good thermal shock resistance, high temperature resistance, good wear resistance, good fluidity, low conductivity, high impact strength, compressive strength, and tensile strength. At present, it is widely used in industries such as coatings, ceramics, papermaking, rubber, plastics, synthetic leather, refractory materials, and agriculture. With the further improvement of the mineral processing technology for kaolin, the application scope of kaolin will become increasingly widespread.
