Calcined kaolin is a hard kaolin formed from coal seams, which is ground and calcined at high temperatures multiple times. It loses its crystalline water and forms a fluffy porous sheet-like structure. It has unique performance advantages such as high activity, high whiteness, high dispersion, and high coverage. In addition, it is environmentally friendly with non-toxic, non radiative, and non polluting properties, and is widely used in various fields such as papermaking, coatings, paints, and environmental protection. The application of electrophoretic paint has some unique properties that can improve the quality and performance of coatings.
