Calciphylaxis, also known as calcific uremic arteriolopathy (CUA), is a rare condition characterized by calcification or the aggregation of calcium in a patient's blood vessels and the development of thrombosis. This can lead to the death of cells in a patient's skin and fatty tissues, thereby causing death. It is seen mostly in people with end-stage kidney disease but can occur in the earlier stages of chronic kidney disease and rarely in people with normally functioning kidneys. It results in chronic non-healing wounds and is usually fatal.
