## Abstracts

According to our (Global Info Research) latest study, the global Calcite Polarizers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Calcite polarizers are crystals used to separate unpolarized light into two separate plane polarized beams. Unpolarized light that enters a birefringent crystal is broken into two separate plane polarized beams. These are usually referred to as the ordinary (o-ray) and extraordinary (e-ray) rays. Calcite crystal is a natural birefringent material, which may be ground, cut, and polished to exact angles creating optical axis, making it a useful polarizer.
