According to our (Global Info Research) latest study, the global Calcium AKG Supplement market size was valued at US\$ 107 million in 2024 and is forecast to a readjusted size of USD 208 million by 2031 with a CAGR of 10.1% during review period.

AKG is a chemical produced naturally in the body up until the age of about 40, but then drastically reduces. Taking a Calcium Alpha-Ketoglutarate (Ca-AKG) supplement can help to increase both lifespan and healthspan (keeping you healthier as you age).

A dietary supplement is a manufactured product intended to supplement one's diet by taking a pill, capsule, tablet, powder, or liquid. A supplement can provide nutrients either extracted from food sources or that are synthetic in order to increase the quantity of their consumption. The class of nutrient compounds includes vitamins, minerals, fiber, fatty acids, and amino acids. Dietary supplements can also contain substances that have not been confirmed as being essential to life, but are marketed as having a beneficial biological effect, such as plant pigments or polyphenols. Animals can also be a source of supplement ingredients, such as collagen from chickens or fish for example. These are also sold individually and in combination, and may be combined with nutrient ingredients. The European Commission has also established harmonized rules to help insure that food supplements are safe and appropriately labeled.
