Calcium aluminate cement for refractory materials is a hydraulic binder composed primarily of calcium aluminate minerals. It is widely used in monolithic refractories such as castables, ramming mixes, and gunning materials, where it serves to bind aggregates and provide early strength and high thermal stability. This type of cement is known for its rapid setting, early strength development, high refractoriness, and excellent volume stability under high temperatures. Depending on the alumina content and impurity levels, calcium aluminate cement is available in various grades—including ordinary, pure, and fused types—to meet the performance demands of industries such as steel, non-ferrous metals, cement, and glass.
