The global Calcium Ammonium Nitrate market size is expected to reach \$ 3934.5 million by 2029, rising at a market growth of -11.2% CAGR during the forecast period (2023-2029).

Global calcium ammonium nitrate main manufacturers include EuroChem, Yara, Uralchem, Borealis, Nutrien, etc., totally accounting for about 35%. Europe is the largest production area, with a share over 63%. As for the types of products, it can be divided into nitrogen content 27% and nitrogen content 15.5%. Nitrogen content 27% is the largest segment, holding a share about 86%. In terms of application, it can be divided into agriculture and horticulture. The most common application is in agriculture, with a share over 90%.

Calcium ammonium nitrate is also known as nitro limestone and nitro chalk. Calcium ammonium nitrate is produced by mixing powdered limestone in the ammonium nitrate. It is widely used as fertilizer across the globe. Physiological characteristics of the mixture are neutral. It has the ability to neutralize the acidic soil. Calcium ammonium nitrate is an essential source of nitrogen for plant growth. Nitrogen is quickly absorbed by the plant roots at the fruiting stage; therefore, it is extensively employed by farmers worldwide. The presence of calcium improves soil health for a long period time. The fertilizer grade of calcium ammonium nitrate contains approximately 8% of calcium and around 21% to 27% of nitrogen. Therefore, it is suitable for enhancing root and soil health. Calcium ammonium nitrate is widely used in a number of countries where ammonium nitrate is banned. Calcium ammonium nitrate is hygroscopic in nature due to which it can retain water molecules at room temperature.
