## Abstracts

The global Calcium Behenate market size is expected to reach \$ 18.90 million by 2032, rising at a market growth of 2.2% CAGR during the forecast period (2026-2032).

Calcium behenate is a hydrophobic calcium soap (calcium salt) of behenic acid made midstream by neutralizing behenic acid—sourced upstream from high-behenic vegetable oils (e.g., canola/rapeseed, peanut, moringa) via fatty acid splitting/hydrogenation and purification—with calcium oxide/hydroxide, then supplied downstream mainly as a lubricant, slip/release aid, thickener and processing additive in plastics and rubber, coatings/inks, and in some personal care formulations (e.g., powders) as a texture/adhesion modifier.

In 2025, global Calcium Behenate production reached approximately 945 MT, with an average global market price of around US\$ 16.7 per kg. The global single-line production capacity ranges from 300 to 500 MT per year. The industry's gross profit margin is approximately 20%-25%.
