Calcium ceramic balls are small, spherical ceramic materials primarily composed of calcium-based compounds such as calcium oxide or calcium carbonate, often combined with other ceramic materials like alumina or silica. These balls are designed to serve a variety of industrial and commercial purposes, such as water purification, mineralization, or acting as catalysts and filtration media. In water treatment, calcium ceramic balls release beneficial calcium ions that help balance pH levels and improve water quality by enhancing mineral content. They are valued for their chemical stability, durability, and effectiveness in ion exchange and filtration processes.
