The global Calcium Chloride Used in Cosmetics market size is expected to reach \$ 90.27 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

The calcium chloride used in cosmetics market refers to the commercial supply of cosmetic/industrial-grade calcium chloride as a formulation salt (mainly for viscosity control, stability, and ionic strength adjustment) for personal-care products, whose industry chain runs from upstream calcium sources (limestone/lime) and chloride sources (hydrochloric acid) or by-product recovery from soda ash/potash processes, through midstream reaction/evaporation, purification, drying/flaking or brine preparation and cosmetic-grade quality control, to downstream applications such as shampoos and body washes (thickening with surfactants), bath salts and scrubs, deodorants/antiperspirants, and various skincare formulations where salt balance and texture need tuning.

In 2025, global Calcium Chloride Used in Cosmetics production reached approximately 4466 MT, with an average global market price of around US\$ 15.8 per kg. The global single-line production capacity ranges from 300 to 500 MT per year. The industry's gross profit margin is approximately 20%-25%.
