## Abstracts

According to our (Global Info Research) latest study, the global Calcium Copper Titanate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Calcium copper titanate, also known as CCTO, is a high dielectric constant inorganic energy storage material and one of the best materials for making supercapacitors. The higher the dielectric constant of the dielectric material, the greater the energy that can be stored. CCTO has an abnormally large dielectric constant and extremely low loss ( $\tan\delta < 0.03$ ). CCTO has high thermal stability and can be used in a wide range (100 ~600K), the dielectric constant value remains unchanged, only when the temperature is cooled below 100K, the dielectric constant of CCTO drops sharply ( $> 100$ ), so the electronic ceramic material made by adding CCTO can be used as a dielectric Electric and piezoelectric ceramic components, the use of this special ceramic component can reduce the friction and heat generation of components, thereby alleviating the problem of easy aging of components.
