## Abstracts

The global Calcium Cyanamide market size is expected to reach \$ 376 million by 2032, rising at a market growth of 1.2% CAGR during the forecast period (2026-2032).

Calcium cyanamide (CAS 156-62-7) is a chemical compound used in industrial agricultural fertilizers. The fertilizer calcium cyanamide helps plants to reach high yields, thus maximizing profits for farmers. The chemical is applied directly to the soil, where it breaks down into ingredients that are beneficial to plant growth. Calcium cyanamide also functions in other facets in addition to being a fertilizer. In 2025, global Calcium Cyanamide production reached approximately 412 K MT.

Supported by its role as a niche nitrogen fertilizer and soil-treatment input rather than a mass-volume commodity like urea. Growth tends to track longer-term agriculture fundamentals—cropped area, intensification, and growers' willingness to pay for multi-function inputs—so it often appears as incremental gains over time rather than sharp spikes.

A key engine of demand is calcium cyanamide's "dual-use" profile: beyond supplying nitrogen, it can contribute to weed suppression and reduction of soil-borne disease pressure when used correctly, which makes it attractive in certain high-value cropping systems and soil remediation programs. This positioning aligns with broader adoption of integrated pest/weed management and interest in inputs that support soil hygiene and residue breakdown, while still requiring careful timing because phytotoxic effects can occur if planting is too soon after application.

On the supply and competitive side, growth is shaped by regional concentration of production capacity and by cost/operational factors typical of reactive, regulated chemicals (handling requirements, environmental constraints, and logistics). Calcium cyanamide also faces constant substitution pressure from other nitrogen fertilizers and crop-protection tools, so its growth tends to be strongest where its combined agronomic benefits (fertility plus soil treatment effects) are valued enough to justify adoption.

Overall, the market's trajectory is positive but usually moderate, with performance varying by region and crop mix.

This report studies the global Calcium Cyanamide production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Calcium Cyanamide and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
