## Abstracts

The global Calcium Glycerophosphate market size is expected to reach \$ 302 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Calcium Glycerophosphate (CAS No.: 27214-00-2) is a fine white powder serving as an organic calcium source, commonly utilized as a food fortifier, pharmaceutical nutritional supplement, and toothpaste additive. It effectively replenishes calcium, promotes bone health, and aids in the prevention of dental caries as well as the treatment of periodontal disease.

The core upstream raw materials consist of glycerol, phosphoric acid, and calcium salts (such as calcium carbonate or calcium hydroxide). As a commodity, the price of glycerol is subject to fluctuations within the oleochemical and biodiesel industries; conversely, the supply of phosphoric acid is constrained by phosphate rock resources and environmental protection policies. The stability of upstream supply—along with the level of heavy metal control applied to raw materials—directly determines the purity of the downstream product. Midstream production processes are primarily achieved through esterification and neutralization reactions.

Global sales volume is projected to reach approximately 11,000 tons in 2025. Food-grade products typically range in price from \$10 to \$25 per kilogram, while high-specification pharmaceutical-grade and oral-care-grade products can command prices exceeding \$25 to \$45 per kilogram; the industry's overall gross profit margin stands at approximately 25% to 35%.

Calcium glycerophosphate is a quintessential niche functional mineral salt, occupying an industrial position that straddles the realms of food nutritional fortifiers, raw materials for pharmaceuticals and health supplements, and functional ingredients for oral care.

On one hand, the growing focus on bone health, pediatric nutrition, nutritional supplementation for the aging population, and the development of functional foods provide a foundational demand for organic calcium salts. On the other hand, oral care represents a highly differentiated avenue for incremental growth; calcium glycerophosphate can be incorporated into formulations for products such as toothpaste and mouthwash, where it acts synergistically with ingredients like fluoride and hydroxyapatite. Currently, the industry's growth is characterized primarily by moderate market expansion and structural upgrading; consequently, the competitive focus among enterprises is shifting away from the supply of standard-grade, low-cost products toward high-specification offerings—specifically those featuring high purity, strict regulatory compliance, and suitability for integration into final formulations within the oral care and nutritional health sectors.
