The global Calcium Glycerophosphate Used in Cosmetics market size is expected to reach \$ 23.74 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Calcium glycerophosphate used in cosmetics is a cosmetic-grade organic phosphate salt (calcium salt of glycerophosphoric acid) produced upstream from glycerol- and phosphate-derived intermediates (often involving phosphorus chemistry) plus calcium sources through esterification/neutralization, purification, and drying by specialty ingredient makers, then supplied downstream to personal-care formulators as a skin-conditioning, buffering, and mineral/phosphate-replenishing ingredient for applications in creams/lotions, serums, toners, masks, oral-care products, and sensitive-skin formulations.

In 2025, global Calcium Glycerophosphate Used in Cosmetics production reached approximately 576 MT, with an average global market price of around US\$ 30.5 per kg. The global single-line production capacity ranges from 100 to 200 MT per year. The industry's gross profit margin is approximately 20%-25%.
