## **Abstracts**

Calcium hydroxide is a product derived from lime. Lime has two product forms: quick lime and hydrated lime. Quick lime is also known as carbon oxide and is solid, white and crystalline compound at the room temperature. Hydrated lime has various names such as calcium hydroxide, calcium hydrate, slaked lime, caustic lime, pickling lime and many others. It is a soft, white, powdery material with a bitter taste. It is insoluble in ethanol and slightly soluble in water and glycerol, forming a medium strong base which is known to react violently with acids, attacking many metals in the presence of water.

### **Scope of the Report:**

This report focuses on the Calcium Hydroxide in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increase in demand for construction and infrastructure development as one of the primary growth factors for this market. The increase in the construction and infrastructure development are expected to boost the consumption of polymers and concretes, thus, driving the demand for calcium hydroxide as it possesses various applications in the building and construction sector, such as ready-made mortars, interior, and exterior plaster mixes, paving, and coatings.

APAC is expected to be the major revenue contributor to the market by 2021.
