Abstracts

The global Calcium Hydroxymethionine market size is expected to reach \$ 37.47 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032).

Calcium hydroxymethionine is an organic calcium salt used mainly as an animal nutrition mineral–amino acid supplement, produced upstream from methionine/hydroxymethionine intermediates (made via petrochemical routes) and calcium sources (lime/calcium hydroxide or carbonate) through neutralization and drying by feed-additive manufacturers, then supplied downstream to premix producers and feed mills for inclusion in poultry, swine, ruminant and aquaculture feeds to support methionine supply, growth performance and calcium nutrition.

In 2025, global Calcium Hydroxymethionine production reached approximately 5269 MT, with an average global market price of around US\$ 5525 per MT. The global single-line production capacity ranges from 400 to 600 MT per year. The industry's gross profit margin is approximately 20%-25%.
