According to our (Global Info Research) latest study, the global Calcium Oxide Expanding Agent market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Calcium Oxide Expanding Agent is a specialty admixture made primarily from high-purity quicklime (CaO) that reacts with water to generate controlled expansion in cementitious systems, helping compensate for shrinkage, reduce cracking, and improve dimensional stability in concrete, grouts, and mortars. The supply chain begins with limestone mining and calcination in rotary or shaft kilns to produce CaO; the material is then finely ground, classified, and blended with performance modifiers depending on the required expansion rate. Manufacturers supply the product to distributors or directly to downstream users such as ready-mix concrete plants, precast concrete producers, grout formulators, and infrastructure contractors, where the agent is incorporated into mixes to enhance early-age expansion and long-term durability in tunnels, dams, foundations, and large structural pours. In 2024, global Calcium Oxide Expanding Agent production reached about 3.25 million tons against a capacity of 3.85 million tons, with an average price of USD 180?360 per ton. The industry operated with a stable 22% gross margin.
