The global Calcium Propionate Used in Cosmetics market size is expected to reach \$ 45.68 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Calcium propionate used in cosmetics is a cosmetic-grade calcium salt of propionic acid manufactured upstream from propionic acid (typically petrochemical- or bio-based) and calcium sources (such as calcium hydroxide/carbonate) via neutralization, purification, and drying by specialty chemical suppliers, then sold downstream to personal-care formulators mainly as a preservative-support/antimicrobial or formulation-stabilizing ingredient in products like creams, lotions, cleansers, masks, and certain hair/body care items where microbial control and shelf-life robustness are needed.

In 2025, global Calcium Propionate Used in Cosmetics production reached approximately 23.5 K MT, with an average global market price of around US\$ 1428 per MT. The global single-line production capacity ranges from 2 to 5 K MT per year. The industry's gross profit margin is approximately 20%-25%.
