According to our (Global Info Research) latest study, the global Calcium Sulfate Network Floor market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Calcium sulfate network floor, also known as calcium sulfate raised floor or calcium sulfate composite floor, is a modern floor system mainly used in data centers, telecommunications rooms, electronic factories, laboratories and other environments that require efficient heat dissipation and highly flexible wiring.

Calcium sulfate network floor is mainly composed of calcium sulfate crystals, high-density fiberboard, metal brackets and decorative surface layer. Among them, calcium sulfate crystals are the main material of the floor, which has good fire resistance, waterproof, mildew resistance, and corrosion resistance, as well as excellent mechanical strength and wear resistance. High-density fiberboard as the base material provides the stability and bearing capacity of the floor. The metal bracket is responsible for supporting the weight of the floor and ensuring the flatness and stability of the floor. The decorative surface layer can be selected according to actual needs, and common ones include PVC surface layer, wooden surface layer, etc.

The biggest feature of calcium sulfate network floor is its high flexibility and adjustability. The metal bracket under the floor can be adjusted according to actual needs to adapt to

different ground conditions and load requirements. At the same time, the floor itself can also be disassembled and reorganized to facilitate the installation and maintenance of equipment. In addition, the calcium sulfate network floor also has good heat dissipation performance, which can effectively conduct the heat generated by the equipment to under the floor to maintain the normal operation of the equipment.
