Calcium tablets are elemental forms of calcium, an essential mineral for human health that may be taken to supplement calcium obtained from dietary sources or to address a calcium deficiency. Most supplements contain one of two forms of calcium—calcium carbonate and calcium citrate. Since vitamin D is needed to help the body absorb calcium, many calcium supplements also contain vitamin D.

Calcium is the most abundant mineral in the body. Between one and two percent of body weight is calcium—the average male has about three pounds of calcium; the average female contains about two pounds—and nearly all of it—99%—is concentrated in the bones and teeth. The remaining one percent is in the cells of the body, blood, and extracellular fluid (the fluid between cells).
