Abstracts

Calcium-zinc stabilizer is synthesized with calcium salt, zinc salt, lubricant, antioxidant, etc. as the main components by a special compounding process. It can not only replace toxic stabilizers such as lead and cadmium salts and organic tin, but also has good thermal stability, light stability, transparency and tinting strength. Practice has proved that in PVC resin products, it has good processing performance and thermal stability equivalent to lead salt stabilizers, which is a good non-toxic stabilizer.
