Abstracts

The global Calendered Aluminum Foil market size is expected to reach \$ 3995 million by 2029, rising at a market growth of 6.4% CAGR during the forecast period (2023-2029).

High-demand industries: Rolled aluminum foil has a wide range of applications in food and beverage packaging, pharmaceutical packaging, electronic products, construction and building materials, etc. The growth and development of these industries has positively impacted the demand for rolled aluminum foil.

Growth Drivers: Growing demand for safe, convenient, and sustainable packaging is driving the food and beverage industry to adopt rolled aluminum foil as a packaging material. In addition, the popularity and rising demand of electronic products and the demand for lightweight, corrosion-resistant materials in the construction and building materials industry are also driving the growth of the rolled aluminum foil market.

Regional market: North America and the Asia-Pacific region are the main consumption regions in the global rolled aluminum foil market, among which emerging economies such as China and India play an important role in demand growth. Some developed markets such as Europe also have a stable demand for rolled aluminum foil.

The electrolytic aluminum ingots with a content of 99.35% to 99.97% are first trimmed on a milling machine to remove defects such as burrs, oxidation spots and bubbles on the surface of the aluminum ingots, and process them into flat and smooth aluminum blocks. The processed aluminum block is then hot-rolled after heating or cold-rolled after annealing, and rolled into an aluminum sheet with a thickness of 3.175-0.584 mm. Then the aluminum sheet is annealed, after single-layer or double-layer (when the

aluminum sheet is rolled to a thickness of about 0.038mm, you can put the two aluminum sheets into the rolling mill at the same time, and roll the two sheets together to form aluminum foil) multiple times. Rolled, rolled metal aluminum foil film is called calendered aluminum foil (metal aluminum foil or pure aluminum foil), which is commonly known as aluminum foil. The aluminum foil commonly used in flexible packaging has a thickness of 7-9 μ m.
