Abstracts

According to our (Global Info Research) latest study, the global Calendered Silicone Cloth market size was valued at US\$ 165 million in 2025 and is forecast to a readjusted size of US\$ 262 million by 2032 with a CAGR of 6.8% during review period.

In 2025, global sales volume of Calendered Silicone Cloth was approximately 32 million square meters, with an average market price of about USD 5 per square meter. The gross margin of major manufacturers was generally in the range of 22%-38%.

Calendered Silicone Cloth is a flexible composite material made by using fiberglass fabric, aramid fiber fabric, or polyester/nylon fabric as the reinforcing substrate, and uniformly laminating silicone rubber onto the substrate through a calendering and vulcanization process. Compared with conventional silicone-coated fiberglass fabric, Calendered Silicone Cloth features a denser and stronger bond between the silicone rubber layer and the base fabric, delivering higher overall strength, better wear resistance, improved dimensional stability, and stronger sealing performance, although its flexibility is relatively lower. The product is more suitable for industrial environments with high-temperature exposure, abrasion, repeated bending, and sealing requirements, and can be used for protection, thermal insulation, sealing, and flexible connection in industrial plants, high-temperature equipment, and continuous operating conditions. Due to its good wear resistance and long service life, it can reduce replacement frequency during long-term use and therefore offers favorable overall cost-effectiveness.

The downstream applications of Calendered Silicone Cloth mainly include Petrochemical, Power and Electrical Equipment, Industrial Machinery, New Energy

Vehicle, Aerospace, and Construction. Specific uses include flexible connection and compensation systems, high-temperature insulation protection, sealing gasket materials, fire-retardant protection, electrical insulation protection, and wear-resistant and pressure-resistant composite materials.
