According to our (Global Info Research) latest study, the global Calf Feeding Station market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A calf feeding station is a feeding equipment or facility specially designed for calves. It usually includes a feeding area for storing and distributing feed (such as milk), and a control system for automating the management of the feeding process. When a calf enters the feeding station, the control system can read the calf's number or other identification information and automatically add the appropriate amount of feed to the feeding area based on a preset feeding plan or curve. Calves can access feed through specific feeding devices such as teats or troughs.
