## Abstracts

The global Calf Feeding Station market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A calf feeding station is a feeding equipment or facility specially designed for calves. It usually includes a feeding area for storing and distributing feed (such as milk), and a control system for automating the management of the feeding process. When a calf enters the feeding station, the control system can read the calf's number or other identification information and automatically add the appropriate amount of feed to the feeding area based on a preset feeding plan or curve. Calves can access feed through specific feeding devices such as teats or troughs.
