According to our (Global Info Research) latest study, the global Calorimeters and Thermal Analysis Equipment market size was valued at USD 4388.2 million in 2023 and is forecast to a readjusted size of USD 5214.7 million by 2030 with a CAGR of 2.5% during review period.

Thermal analysis instruments ordinarily measure dimension change, weight loss, heat flow, or mechanical properties as a component of temperature. Thermal analysis is broadly being used as a part of businesses because of its properties, for example, volatilization, oxidation, crystallization, glass transitions, cross-linking, modulus, coefficient of thermal expansion, and decomposition. These trials empower the client to analyze end-use execution, stability, composition, molecular structure, processing, and performance.

North America is expected to account for the largest share of the global thermal analysis market during the forecast period. The growth of the North American region is attributed increasing industrial R&D expenditures across various end-user industries; availability of private-public funding for research studies, stringent regulatory norms for drug development; and strict food and product safety regulations.
