## Abstracts

The global Camellia Oleifera Seed Oil market size is expected to reach \$ 2178 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

Camellia oleifera seed oil is a natural vegetable oil extracted from the seeds of Camellia oleifera, widely used in edible oil, personal care, cosmetic, and specialty ingredient applications. It is valued for its high oleic acid content, mild flavor, oxidation stability, and skin affinity, and is commonly marketed as tea seed oil or camellia oil in different regions. Typical products include crude oil, refined edible oil, cold-pressed virgin oil, cosmetic-grade oil, and OEM/private-label packaged products. From a value chain perspective, upstream includes camellia fruit cultivation, seed harvesting, drying, storage, pressing equipment, refining materials, packaging materials, and quality testing inputs; midstream involves seed processing, oil extraction, refining, filtration, deodorization, filling, and branding; downstream demand comes from household cooking oil, premium food products, beauty and personal care, nutraceuticals, and ingredient distribution channels. In 2025, the average selling price is approximately US\$7,250 per ton, global shipments are about 0.18 million tons, and industry gross margin generally ranges from 22% to 38%, supported by premium positioning, limited high-quality raw material supply, and expanding food-plus-cosmetic application demand. Camellia oleifera has long been cultivated in China for edible oil, and recent literature continues to describe China as the world's largest production base for camellia oil.

The market is moving from a traditional regional edible oil category toward a broader premium natural oil segment spanning food, beauty, and health-oriented applications. This is expanding the commercial value of camellia oleifera seed oil beyond household

cooking and into cosmetic formulations, specialty ingredients, and gift-oriented premium packaging.

A major trend is the continued expansion of upstream cultivation and raw material supply in China. Recent policy action and expansion plans for tea-oil camellia planting indicate that supply capacity is still being strengthened, which supports medium-term output growth while also encouraging processing upgrades and industrial consolidation.

Another important direction is product differentiation by extraction method, grade, and end use. Cold-pressed, organic, refined cosmetic-grade, and premium edible-grade products are increasingly marketed separately, and this is helping widen ASP dispersion within the category.

This report studies the global Camellia Oleifera Seed Oil production, demand, key manufacturers, and key regions.
