The global Camera Cable market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Camera cable is a type of electrical cable that connects a camera to a power source, a signal transmitter, or a control unit. Camera cables can vary in their design, function, and application depending on the type of camera and the purpose of the connection. Some common types of camera cables are:

- Triaxial cable: A cable that has three layers of conductors and insulation, providing greater bandwidth and interference rejection than coaxial cable. It is mainly used in television production to connect a camera to its camera control unit (CCU), allowing for simultaneous transmission of power, video, audio, and control signals.
- Ethernet cable: A cable that transmits video data over an internet connection. It can also power certain camera types, known as power over ethernet (PoE) cameras, eliminating the need for a separate power cable. Ethernet cables are mainly used for IP cameras, which are digital cameras that send and receive data over a network.
- Coaxial cable: A cable that has a single inner conductor surrounded by a tubular insulating layer and a metallic shield. It transmits unprocessed video signals from analog cameras, which are cameras that use electrical signals to capture images. Coaxial cables can be combined with power cables in a siamese cable, which simplifies the installation of analog cameras.
- Plug and play cable: A pre-made cable that has color-coded connectors attached to both ends. It is thin and flexible, making it easy to install for beginners or DIY

enthusiasts. Plug and play cables are usually unshielded, meaning they are prone to electromagnetic interference from other devices or wires. They are often used for low-end or temporary security camera systems.

-HDMI cable: A cable that transmits high-definition video and audio signals from a recorder (such as an NVR or DVR) to a monitor for remote viewing. HDMI cables are not used for connecting cameras directly, but they are useful for displaying the recorded footage from a security camera system.
