Abstracts

The global Camera Gimbal Stabilizer market size is expected to reach \$ 1337 million by 2032, rising at a market growth of 8.1% CAGR during the forecast period (2026-2032).

In 2025, global Camera Gimbal Stabilizer production reached approximately 2,300 K units, with an average global market price of around 325 US\$/unit.

A camera gimbal stabilizer is an electronic or mechanical device designed to reduce camera shake, maintain horizontal and vertical stability, and ensure smooth footage when shooting with a camera, smartphone, or professional camera. It achieves stability by compensating for unexpected movements during shooting using motors, gyroscopes, and sensors.

With the widespread adoption of short video platforms, live streaming, and amateur video creation, the demand for camera stabilizers among individual consumers continues to grow. Consumers want to shoot high-quality, smooth videos even without professional equipment. Meanwhile, professional fields such as commercial shooting, documentary production, and filmmaking also have a stable demand for high-performance stabilizers to improve shooting efficiency and quality. The corresponding business opportunity lies in developing products that combine portability, multi-device compatibility, and intelligent features to meet the diverse needs of different user groups, expand application scenarios to emerging fields, and provide customized solutions for professional users. Furthermore, the increasing popularity of mobile shooting and content creation will further drive market growth and bring continuous business opportunities.
