A camera lens adapter is an accessory that allows you to mount a lens from one camera onto a different camera body. The adapter serves as the interface between the lens and the camera, and enables you to use lenses from different brands or systems on your camera. This is useful for photographers who may have invested in expensive lenses and want to continue using them when switching to a different camera system, or for those who want to experiment with different lenses and systems without having to buy new lenses. Some adapters also offer additional features such as autofocus and image stabilization, although these may not work as effectively as native lenses.
