Abstracts

The global Camera Module Actuator market size is expected to reach \$ 4531 million by 2032, rising at a market growth of 2.2% CAGR during the forecast period (2026-2032).

Camera Module Actuator is a key component in the smartphone camera system, used to precisely control the movement of the lens to achieve functions such as automatic aiming and optical image stabilization. These Actuators can help the camera module adjust the lens position and record sound. Mobile phone cameras usually include different types such as Voice Coil Motor (VCM) and Shape Memory Alloy (SMA).

The future development trend of the Camera Module Actuators market will be shaped by the growing demand for high-resolution imaging, multi-camera setups, and advanced photography features in smartphones. Actuators are expected to become more compact and energy-efficient while delivering faster autofocus and precise stabilization to meet the increasing requirements of 5G-enabled devices and AI-driven photography. As smartphones become slimmer and more compact, there is a growing need for smaller, more efficient camera actuators. Companies developing MEMS (Micro-Electro-Mechanical Systems) or SMA (Shape Memory Alloy) actuators can capitalize on the opportunity to provide miniaturized solutions without sacrificing performance. SMA actuators offer a compact alternative to VCMs. These actuators are particularly valuable for flagship devices where space is limited, but high-quality performance is essential. Their ability to enable precise lens movements for both AF and OIS in a small package opens up growth opportunities in high-end devices.
