According to our (Global Info Research) latest study, the global Camera Obscura market size was valued at USD 173.9 million in 2023 and is forecast to a readjusted size of USD 227.7 million by 2030 with a CAGR of 3.9% during review period.

A camera obscura also called pinhole camera, it is a simple camera without a lens but with a tiny aperture, a pinhole camera – effectively a light-proof box with a small hole in one side. Light from a scene passes through the aperture and projects an inverted image on the opposite side of the box, which is known as the camera obscure effect. Pinhole cameras can also be constructed by replacing the lens assembly in a conventional camera with a pinhole. In particular, compact 35 mm cameras whose lens and focusing assembly have been damaged can be reused as pinhole cameras—maintaining the use of the shutter and film winding mechanisms. As a result of the enormous increase in f-number, while maintaining the same exposure time, one must use a fast film in direct sunshine.

The camera obscura market is driven by several factors: Growing demand for vintage and retro photography: The camera obscura is a vintage photography technique that offers a unique and artistic way of capturing images.
