Abstracts

The global CAMM2 Memory Module market size is expected to reach \$ 463 million by 2032, rising at a market growth of 29.6% CAGR during the forecast period (2026-2032).

In 2025, global production of CAMM2 memory modules reached 340,000 units, with an estimated average selling price of \$221 per unit. CAMM2 memory module is a new generation of detachable, compression-connector-based memory module form factors standardized by JEDEC. Essentially, it is a new type of memory module comprising DRAM chips, a PCB/substrate, a compression connector, a mounting mechanism, and a heat spreader designed to replace certain traditional SO-DIMM, soldered LPDDR, and compact DIMM solutions. It is primarily used in AI PCs, high-end thin-and-light laptops, mobile workstations, compact desktops, industrial PCs, high-performance gaming laptops, repairable/upgradable laptops, and future low-power memory platforms for AI servers. The upstream supply chain includes DRAM chips, memory PCBs/substrates, compression connectors, mounting screws/heat spreaders, power management and identification chips (such as SPD/PMIC), testing equipment, and packaging materials. The midstream involves memory module design, SMT assembly, testing, and validation. The downstream sector comprises laptop and workstation manufacturers, motherboard manufacturers, as well as industrial PC, AI PC, and future AI server platform providers. Gross profit margin ranges from approximately 35% to 55%.
