Abstracts

The global Campholenic Aldehyde market size is expected to reach \$ 51.76 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

In 2025, global Campholenic Aldehyde production reached approximately 4,528 tons, with an average global market price of around US\$8,024 per ton. Campholenic Aldehyde is appears colorless liquid with fresh and woody odor. It is prepared by the isomerization reaction of 2,3-epoxy pinane. Campholenic aldehyde can be used as an intermediate in the synthesis of sandalwood fragrances.

The global campholenic aldehyde market is closely tied to the consumption trends of sandalwood-type fragrances. As a key intermediate in the synthesis of sandalwood fragrance compounds, its demand largely depends on the development of the fine fragrance and personal care sectors. With consumers increasingly seeking long-lasting and sophisticated scent experiences, sandalwood notes maintain a stable presence in high-end perfume and personal care formulations, providing a solid downstream foundation for campholenic aldehyde.

On the supply side, production capacity is concentrated among a limited number of companies that possess integrated capabilities from turpentine deep-processing to advanced fragrance synthesis. The industry features high technical barriers and a concentrated competitive landscape. Raw material supply heavily relies on turpentine resources, and recent fluctuations in turpentine export volumes directly impact the cost structure of campholenic aldehyde.

Furthermore, the global flavors and fragrances industry faces tightening environmental regulations. Major consumer markets continue to upgrade chemical registration,

evaluation, and authorization requirements, making safety assessment and compliance fundamental for international market access. This trend places higher demands on manufacturers? R&D capabilities and quality control systems, shifting industry competition from pure capacity expansion toward technological strength and green production processes.

This report studies the global Campholenic Aldehyde production, demand, key manufacturers, and key regions.
