The global Camping Gas Grill market size is expected to reach \$ 741 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of camping gas grills is estimated at approximately 2,950,000 units, with an average selling price of around USD 165 per unit. A camping gas grill is a portable outdoor cooking device powered primarily by liquefied petroleum gas (LPG) or butane, designed for camping, picnics, and mobile cooking scenarios. These products offer convenient ignition, stable temperature control, cleaner operation, and ease of use, providing clear advantages over charcoal grills in terms of convenience. They typically consist of burner systems, gas control units, cooking grates, and foldable supports or compact housing structures, with some models integrating multifunctional cooking features to enhance versatility. With the rise of camping culture and outdoor lifestyles, these products are evolving toward lightweight design, compact size, and multifunctional integration.

From a market structure perspective, camping gas grills represent a portable segment within the broader grill market, with demand closely linked to the growth of camping activities and outdoor consumption trends. Compared with traditional backyard grills, these products emphasize portability and ease of use, targeting younger consumers and outdoor enthusiasts. Industry barriers are relatively low, with competition mainly focused on product design, brand channels, and user experience optimization. The market is relatively fragmented, although brand influence and product differentiation are becoming more important in the mid-to-high-end segment.
