## Abstracts

According to our (Global Info Research) latest study, the global Camshaft Bracket market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The camshaft bracket is a part of the automobile braking system, mainly used to support the camshaft. The existing camshaft bracket and the cylinder head use a positioning ring to cooperate. Generally, the positioning ring and the camshaft bracket have an interference fit. The positioning ring Mates with cylinder head transitions or small clearances. When the engine is running, the camshaft bracket is not easy to disassemble in the process of dismantling the engine. Usually, the camshaft bracket needs to be knocked and vibrated left and right to disassemble the camshaft bracket. During this process, the camshaft bracket is easy to be damaged.
