A CAN-bus device converter, also known as a CAN-bus converter or CAN-bus gateway, is a device used to facilitate communication between different Controller Area Network (CAN) networks or devices with varying CAN protocols and data formats. The Controller Area Network is a widely used communication protocol in automotive, industrial, and other applications for transmitting data between various electronic control units (ECUs)

and sensors. CAN-bus converters play a crucial role in bridging the gap between different CAN networks or devices that use different communication standards.
