According to our (Global Info Research) latest study, the global Cancellous Bone Screw market size was valued at US\$ 215 million in 2025 and is forecast to a readjusted size of US\$ 328 million by 2032 with a CAGR of 6.3% during review period.

Cancellous bone screws, as a core instrument in orthopedic internal fixation, are in a mature and stable growth phase, but are simultaneously undergoing profound transformations driven by material innovation and market consolidation.

This growth is primarily driven by several key factors: the global aging population leading to a significant increase in the incidence of diseases such as osteoporotic fractures and osteoarthritis; The increasing popularity of public fitness activities and the rise in trauma cases due to traffic accidents have contributed to an increase in demand for orthopedic implants. Furthermore, the widespread adoption of minimally invasive surgical techniques, which rely on more precise and specialized screw designs, has driven product innovation and demand. In addition, advancements in material science, such as the use of titanium alloys due to their excellent biocompatibility and strength, and the ongoing development of bioabsorbable screws, have also fueled innovation in the market.
