Scope of the Report:

This report focuses on the Cancer Monoclonal Antibodies in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Cancer is one of the leading causes of death globally. There were 10.9 million new cases, in 2002, which increased to 14.1 million, in 2012 (approximately 30% growth in a decade). The WHO expects this number to increase by 70%, over the next two decades. According to the WHO, almost 70% of deaths occur in low and middle-income countries. The increment in data is expected to provide the basis for any national policy on cancer, leading to an increase in the percentage of people choosing cancer treatment. In the healthcare sector, cancer is one of the biggest concerns. Thus, the increased use of monoclonal antibodies for the treatment of cancer is driving this market.

Monoclonal Antibodies having the potential to offer less toxic and efficient therapeutic alternatives to the patients have been emerging in the recent years. Monoclonal Antibodies are used to treat a wide array of diseases related to autoimmune, inflammatory and especially cancer. Monoclonal Antibodies (mAbs) are mono-specific antibodies bodies comprising of identical immune cells that are clones of a single parent cells and are directed to a specific cellular targets. Thus Monoclonal Antibodies are

highly customizable due to its specific nature and can play a crucial role in eliminating the cancerous cell while sparing the normal cells during the cancer treatment. The monoclonal antibodies are proved to be more effective than chemotherapies and drugs for cancer treatment.

The worldwide market for Cancer Monoclonal Antibodies is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
