## **Abstracts**

Cancer stem cells (CSCs) refer to the cells obtained from tumor that possess potential to reproduce all types of cancer cells found in a cancer sample. Cancer stem cells are planned to grow in tumors as a separate population and thereby cause deterioration and metastasis of existing tumor through generation of new tumor. Thus, with advancement in technology especially in cancer stem cells research area, therapies specific to targeting cancer stem cells are expected to improve quality of life and survival cases of cancer patients with metastatic diseases.

Scope of the Report:

This report studies the Cancer Stem Cell market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Cancer Stem Cell market by product type and applications/end industries.
