Abstracts

The cancer supportive care product market consists of drugs intended to prevent or treat the symptoms of cancer, and reduce the side effects of cancer treatments. Instead of extending a patient's life expectancy, the emphasis is on improving overall quality of life.

Scope of the Report:

This report focuses on the Cancer Supportive Care in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. With growing prevalence of cancer, the demand for cancer treatments, such as chemotherapy has also been consistently on the rise since the past decade. However, radiation therapy brings with it a host of side effects that are challenging for cancer patients to face while they undergo the course of treatment. While the cancer treatment realm is tremendously progressing, the incidences of side effects are increasing as well, which are addressed by cancer supportive care. The advent of technology in cancer supportive care has enabled to treat different signs and symptoms following the chemotherapy procedure, in addition to chemotherapy-induced vomiting, nausea, neutropenia, and anemia. The global market for cancer supportive care products is currently thriving at a sound pace and is anticipated to see steady growth over the next few years.

The high investment in the oncology segment and pharmaceutical industry in US and Canada, and the presence of several large vendors operating in US contribute to the growth of the palliative cancer care market in the Americas. Additionally, constant R&D activities in the oncology sector, strong economic condition, and huge investments in

the healthcare segment further contribute to the market growth. The worldwide market for Cancer Supportive Care is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
