Abstracts

Salmon is the common name for fishes belonging to the family of Salmonidae. It is available from both wild and farmed sources. It is estimated that nearly 60% of the world's salmon production is farmed. Salmon farming started in the beginning of 1960s. Atlantic salmon is the most common type of salmon that is farmed. Major part of Atlantic salmon available around the globe are farmed commercially. The salmon farming production cycle lasts about three years. In the first year, production takes place in controlled freshwater environments. In the second year, the farmed salmon is transported to seawater cages. Once the farmed salmon reaches a size suitable for profitable harvesting, it is transported to processing plants to be prepared for sale.'Scope of the Report:

This report focuses on the Canned Salmon in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The rising demand for salmon across the globe owing to its health benefits is one of the important factors anticipated to encourage the growth of the global canned salmon market in the next few years. In addition, the rising prominence of aquaculture in several regions worldwide is another factor accelerating the growth of the overall market. The tremendously rising demand for seafood and different fish products is anticipated to contribute extensively towards the overall growth of the market. On the other hand, the global canned salmon market is expected to witness several challenges throughout the forecast period. The attack on salmon by sea lice, algae blooms, and other diseases is expected to hamper the growth of the global canned salmon market in the near future. In addition, the damage to the aquatic ecosystem and the rising cases of water contamination are some of the other factors are predicted to

restrict the growth of the global market in the coming years. The worldwide market for Canned Salmon is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
