The global Canned Wet Dog Food market size is expected to reach \$ 19102 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of raw dog food is estimated at approximately 2.2 million tons, with an average selling price of around USD 6,200 per ton. Raw dog food refers to canine pet food products composed primarily of uncooked animal ingredients, including raw meat, bones, organs, and limited plant-based components, preserved and distributed through freezing, freeze-drying, or refrigerated systems to maintain maximum nutritional integrity. The category is based on BARF (Biologically Appropriate Raw Food) or Prey Model Raw feeding philosophies, aiming to replicate ancestral canine diets and primarily targeting premium consumers who prioritize natural feeding, nutritional completeness, and functional health management. Raw dog food is characterized by high animal protein content, minimal processing, and grain-free positioning, while relying heavily on cold-chain logistics, making its supply chain significantly more complex than conventional dog food. Current product forms include frozen raw diets, freeze-dried raw diets, and pre-packaged raw formulations, with ongoing evolution toward single-protein optimization and functional nutrition enhancement such as gastrointestinal health, joint support, and skin care, reflecting a broader shift toward high-meat, minimally processed, and natural nutrition systems.

Raw dog food is a premium niche segment within the global pet food industry, characterized by extreme natural positioning and functional nutrition orientation. Demand is primarily driven by the humanization of pet feeding behavior, the widespread adoption of natural diet concepts, and increasing demand for premium pet health management. North America is the largest market, followed by Europe and Australia, while China and broader Asian markets remain in early development stages. The

category mainly targets high-income pet owners, small-breed dogs, and dogs requiring advanced health management, and is partially supported by veterinary nutrition perspectives, although it remains controversial in terms of standardization and food safety regulation. The competitive landscape is dominated by specialized raw food brands and premium pet food companies such as Stella & Chewy's, Primal Pet Foods, and Instinct Raw, while some traditional pet food corporations have entered the segment through premium sub-brands. Key barriers include cold-chain logistics infrastructure, food safety control systems, biological risk management capabilities, and stable raw material supply chains. Due to strict microbial control requirements, regulatory standards vary significantly across countries, limiting global scalability. Key trends include increased freeze-dried and standardized formulations, stronger functional nutrition positioning, and a gradual shift from extreme natural feeding ideology toward a balance between scientific nutrition and natural diet structures, with growth concentrated mainly in the premium segment rather than mass adoption.
