A cantilever probe holder, also known as a cantilever probe card or a cantilever probe clamp, is a device used to fix a cantilever probe. The cantilever probe is a tool used in nanoscale measurement and characterization techniques such as atomic force microscopy (AFM), scanning probe microscopy (SPM), etc. In these techniques, cantilever probes need to be precisely fixed in specific positions for high-resolution surface scanning and measurement. The cantilever probe clamp provides a stable way to ensure the accurate distance between the cantilever probe and the sample surface, ensuring the accuracy and reliability of measurements. As the requirements for nanoscale measurement accuracy continue to increase, the cantilever probe holder will continue to pursue higher accuracy and stability to ensure the accuracy of measurement results.
