Abstracts

Cantilever pump is a specialized type of vertical sump pump designed to be installed in a tank or sump but with no bearing located in the lower part of the pump. Thus, the impeller is cantilevered from the motor, rather than supported by the lower bearings. In general, cantilever pumps are best for relatively shallow sumps, usually around 8 to 10 feet maximum. This is because the deeper the sump, the larger the shaft diameter that is required to cantilever the impeller.

According to our (Global Info Research) latest study, the global Cantilever Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
