Abstracts

The global Cantilever Rack market size is expected to reach \$ 1117 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032). In 2025, global cantilever rack production reached approximately 287 k units, the average price is 2800 usd/unit. Cantilever rack is an industrial storage rack system which takes column as main load-bearing component and supports goods through unilateral or bilateral horizontal cantilever. It is suitable for storing long size, heavy load or irregular materials. The structure is open, no front pillar shelter, convenient for forklift or lifting equipment to directly access goods, with high space utilization, high loading and unloading efficiency and flexible configuration, widely used in steel, pipe, profile, wood, plate and manufacturing and logistics storage fields.

Market Concentration and Key Players:

From an international perspective, the cantilever shelf market concentration is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Mecalux and SSI SCHAEFER and other large manufacturers; from the domestic point of view, cantilever shelf manufacturers have Jiangrui Group and Nanjing Shenghong Logistics Equipment Manufacturing.

Manufacturing Process and Market Trends:

The core of the manufacturing process of cantilever shelves lies in its structural design and material processing, and its market development is closely linked to the needs of modern warehousing logistics. In manufacturing, the shelf mainly uses H-shaped steel or cold-rolled steel as the column, through special equipment rolling forming and stamping precision spacing of the connecting holes, cantilever is more than the choice of square pipe or C-shaped steel, welded at one end of the anti-skid guard, the other end through the plug or bolt way firmly connected with the column. After welding, all metal components need to be treated by shot blasting to remove oil and rust, and then the surface is sprayed. This process ensures the corrosion resistance and appearance

quality of the shelf. Finally, the overall stability is enhanced by connecting rods and back tension structures.

In terms of market trends, the cantilever shelf industry is growing steadily. The regional pattern shows that Europe and America dominate the high-end market, while China, as the largest single market in the world, has become the core engine of growth, especially in East China and South China, where major production capacity has been concentrated. Product evolution presents a clear direction, heavy shelves occupy the mainstream of the market with their single-layer multi-ton load-bearing capacity, while intelligent transformation has become the key, intelligent cantilever shelves integrated with sensors and warehouse management systems have increased significantly, and are moving towards automated access and real-time inventory monitoring.
