Abstracts

According to our (Global Info Research) latest study, the global Cantilever Vision Measuring Machine market size was valued at US$ 338 million in 2025 and is forecast to a readjusted size of US$ 476 million by 2032 with a CAGR of 5.0% during review period.

In 2025, global cantilever vision measuring Machine production reached approximately 20541 units, the average price is 16 k usd/unit.Cantilever Vision Measuring Machine is a precision optical dimensional metrology system characterized by a single-side column or C-frame supporting the optical Z-axis above an open XY measuring stage. The machine integrates a granite or other high-stability base, precision linear guides and scales, CCD/CMOS imaging, telecentric or zoom optics, programmable surface and contour illumination, motion control and dimensional measurement software to perform non-contact measurement of lengths, diameters, angles, positions, profiles and geometric tolerances. Automatic configurations typically combine CNC XYZ positioning, autofocus, automatic lighting and programmable inspection routines, while higher-specification systems may integrate touch probes or laser sensors for 2.5D and 3D measurement. The research scope focuses on dedicated cantilever or structurally equivalent C-frame vision measuring machines used in electronics, semiconductor components, precision machining, automotive parts, molds, medical components and other dimensional quality-control applications. ISO 10360-7 provides acceptance and reverification principles for Cartesian coordinate measuring machines using imaging probing systems, forming an important metrological reference for higher-accuracy vision measurement platforms.
